Manifest MedEx enables California's leading health plans to better coordinate care, improve patient outcomes, manage population health, and improve efficiency.

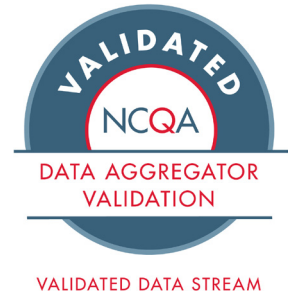

MX's solution suite, which includes direct data feeds and access to our applications, [MX Notify](#) and [MX Access](#), provides a variety of ways that health plans can share and access member information based on a plan's data sharing standards and technology. With MX, health plans can:

- ✓ Start concurrent review and coordinate care right away with admission, discharge, and transfer (ADT) notifications; MX sends 3M ADT notifications per month
- ✓ Optimize utilization management and quickly learn new member medical histories with longitudinal patient records
- ✓ Save time and reduce the burden of HEDIS® reporting with NCQA validated primary source data
- ✓ Identify care gaps to improve quality with clinical data extracts for HEDIS® reporting
- ✓ Simplify risk adjustment with easy-to-consume clinical chart notes
- ✓ Improve population health with insights from analytics and reports like our Chronic Conditions Risk Report and Health Equity and Social Drivers of Health (SDOH) Report to target support to members who need it the most
- ✓ Meet Data Exchange Framework (DxF) data sharing requirements under AB 133 to share claims, encounter information, and clinical data

NCQA Validated Data

With Manifest MedEx, the only data aggregator in California with NCQA validated data, health plans have access to standard supplemental data for Healthcare Effectiveness Data and Information Set (HEDIS®) reporting instead of needing to obtain it from individual providers every year.

Without the need for any additional primary source verification, health plans reduce provider abrasion and the time they spend assembling patient charts and confirming accurate data, allowing more time and energy to focus on the health and wellness of their members.

Putting Data from MX to Work for Health Plans

Health plans across California utilize the Manifest MedEx network to accelerate time-to-value for members, improve care coordination, fuel quality improvement, and more. The health data provided by MX is a key resource for health plan teams to take quick action and provide responsive, personalized, and proactive care to members.

Health plans can save time with data from MX, including reducing chart chases with clinical notes for risk adjustment; using NCQA validated data to streamline HEDIS reporting®; applying extracted clinical data for HEDIS® measures to improve quality and close care gaps, and leveraging other data services such as CCDA forwarding and ADT, ORU, RDE, VXU forwarding to support a variety of health plan priorities.

Actionable Insights for Population Health Management

Manifest MedEx helps health plans gain actionable insights from analytics and data reports to better understand their population health and target support for those who need it the most, including members with chronic conditions at high risk of Emergency Department (ED) and inpatient (IP) utilization, as well as those who are experiencing health disparities and social risk factors.

“By partnering with MX and utilizing our breadth of member data, we are able to identify members in realtime who are at risk of an inpatient stay or readmission which allows us to take proactive, actionable steps to maximize care coordination and delivery, while at the same time providing the member with a quality experience.”

– Mark Reynolds, Chief Operating Officer, Anthem Blue Cross of California
